Technical Capacity Optimization: VIP PIRINEOS

From the 1st of October 2017 to the 30th of November 2035

METHODOLOGY

- Currently, TIGF and Enagás calculate, agree, publish and offer capacity in the VIP Pirineos (Larrau and Biriadou / Irun).
- This joint approach is based on an in-depth analysis of the technical capacity in the interconnection of both parties and takes into consideration a dynamic approach re-calculating the technical capacity whenever needed, such as in case of critical demand changes, both at wide level and at local level, or in case of commissioning of new infrastructures that might have an impact in cross-border capacities.
